

Telegram Admin Bot Documentation

Code Modifications:

```
198 # Access variables Definition
199 api_id = API_ID
200 api_hash = 'API_HASH'
201 phone = 'Phone_number_with_country_code_with_a_plus' #Eg +919876543210 for Indian number
202
203 # Group id
204 group_id = GROUP_ID
205 group_access_hash = 'GROUP_HASH'
206
207 # Function Calls
208 telegrambot = TelegramBot(api_id, api_hash, phone)
209 await telegrambot.startClient()
210 await telegrambot.getChannelsList()
211 await telegrambot.getUsersList()
212 await telegrambot.addMembers(group_id, group_access_hash)
213
```

Add the above variables.

- 1) API_ID - should be a number without quotes
- 2) API_HASH - should be an alphanumeric sequence inside single quotes
- 3) Phone number followed after '+country_code' - inside single quotes
- 4) GROUP_ID of the group in which members need to be added - no quotes
- 5) GROUP_HASH - single quotes

Getting API Hash and ID:

Visit

https://core.telegram.org/api/obtaining_api_id#:~:text=Obtaining%20api_id&text=Log%20in%20to%20your%20Telegram,one%20api_id%20connected%20to%20it.

Getting Group ID and Hash:

- 1) Run the code for the first time after modifying the above variables
- 2) Open the **groups.csv** file generated by the code
- 3) Get the group id and access hash

- 4) Remove the **E+018/some number** and also **remove the dot after the first number in the sequence.**

For eg. For StartupLanes.com

Group_id = 1214432244

Group Access hash = '-393960247522834' (after removing '.' and 'E+018') in single quotes

Starting the code:

Close the code after first run and restart after 1-2 min. Everything should work fine.

Your group invitation will be sent to all the members one by one without overloading or being marked spam by Telegram.

Happy finding new clients!
